Our strong points

ATAKOM shapes its working criteria according to your expectations

Vision & Mission

To be the best customer service team in our profession. To develop and maintain a first-class infrastructure to ensure employee satisfaction, which drives customer loyalty, which leads to sustained profit growth, which creates improved company value. Our vision for the Telecommunications Sector in Engineering Services is to be a preferred company. With Dynamic Engineering Services, our mission is to facilitate the operator and supplier companies, customer satisfaction, to increase earnings. Quality is not an option, but a necessity. For a company to survive and thrive in an environment of global competition, that company must provide a level of customer satisfaction that will lead to customer loyalty. However, it is impossible to achieve customer loyalty without first providing a quality of service that will ensure total customer satisfaction.

Management

Supported by its own offices, as well as its agents and partners worldwide, Atakom employs a highly trained team of professionals that follows up and follows through on each and every transaction we manage. With our global network, we aim to be the most reliable company in the business with an inspired, people-driven and dedicated approach to serving our valued customers. While we are proficient in offering worldwide moving, telecommunication and any related or special services, we are not be satisfied with only that: we also strive to be committed advisors to our customers and associates. Globalink's objective is to exceed the expectations of our customers through total quality management. Our goal is to provide cost effective alternatives to help our customers to realize their goals.

Quality

By using Total Quality Management techniques, we can locate waste, identify its causes and eliminate it. A good example of waste is rework, which is often more costly than doing the job right in the first place. A common business concept is known as the "1-10-100 Rule". If it takes one unit of costs or effort to complete a job correctly, it will take 10 times that effort to correct an error before it reaches the customer. And once it has reached the customer, it will take 100 times the cost and effort to correct the situation, not to mention the loss of customer goodwill. Our primary objectives are to promote Total Quality Management and to maintain our success through constant dedication, innovative efforts and ongoing investment in quality services.

Corporate Responsibility

We would like to ensure that our customers trust us to perform our daily work in a responsible manner. We would like investors with high social and environmental expectations to choose the securities of Atakom. We would like to see that those customers who look upon Atakom's business and CR activities as private individuals understand and recognize our responsible business conduct. We would like our colleagues to take pride in the way we do our work and identify with our methods via their own responsible conduct. We would like those customers who look upon Atakom's business and CR activities as experts to see us as cooperative partners in the realisation of their own objectives.
